ANTI-DRONE SOLUTION

BOERBOEL

Boerboel EW Anti-Drone Solution

Certified to NATO standards in early 2025, its primary features include full autonomy, quick deployment, remote control, compact size, and undetectability in reactive mode due to the absence of constant emissions.

Key achievements

Among the few reactive EW systems at the tactical level globally

Compliance Standards:

- ISO 9001, ISO 1401
- NATO MIL-STD 810G / MIL-STD 416E

Fully autonomous	Rapid deployment	Remote operation
Multi-channel	KEY FEATURES	Easy-to-use
Compact size	Emission-free	Multi-band

Out-of-the-box principle

Operating modes

Active Mode: Continuous jamming and suppression

Reactive Mode:

- Multi-band, multi-channel engagement
- Stealth operations (no constant emissions)

Mixed Mode:

combination of active and reactive capabilities

Operational capabilities

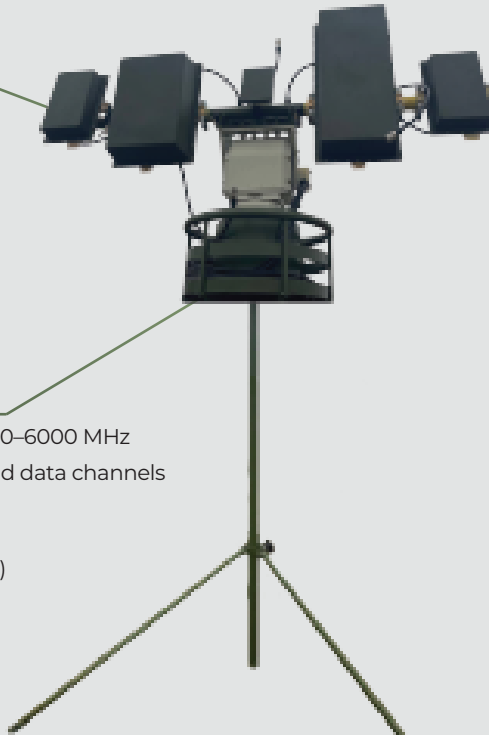

6+ channels (300 MHz each) allocated within 600–6000 MHz

Suppression of GNSS, UAV control/telemetry, and data channels

- DDoS attacks or spoofing possible

Proven battlefield results against:

- Vector (Germany), Leleka and Furia (Ukraine)
- Orlan and Lancet (Russia)
- UAVs based on Silvius, Microhard, DTS communication channels
- Other known commercial and warfare UAVs upon customer request

Operational capabilities

Weight: <20 kg (excluding batteries)

Installation: Vehicle or trailer mounted

Power Amplifiers: 100W per unit (3+ total)

ERP: ~3kW per polarity

Sensitivity: -110 dBm to 0 dBm

Channel Configurations:

- 2RX + 2TX per follower (300 MHz each)
- Assignable within 600-6000 MHz

Open to cooperation with potential customers worldwide
